DETAILED ACTION

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 255-257, 259-264, 270, 279-282, and 286-289 contains the trademark/trade names AlliedSignal and P3X. Where a trademark or trade name is used in a claim as a limitation to identify or describe a particular material or product, the claim does not comply with the requirements of 35 U.S.C. 112, second paragraph. See *Ex parte Simpson*, 218 USPQ 1020 (Bd. App. 1982). The claim scope is uncertain since the trademark or trade name cannot be used properly to identify any particular material or product. A trademark or trade name is used to identify a source of goods, and not the goods themselves. Thus, a trademark or trade name does not identify or describe the goods associated with the trademark or trade name. In the present case, the trademark/trade name is used to identify/describe a compressor and, accordingly, the identification/description is indefinite.

3. Claims 183-209 and 223-289 are rejected under 35 U.S.C. 103(a) as being unpatentable over Numbers (5,775,404) in view of Allied Signal Aerospace.

Numbers discloses substantially all claimed elements of an aircraft deicer system, including a boom mounted on a vehicle, a compressor supported upon the vehicle, and a deicer air jet nozzle located on the boom and connected to the compressor. See especially Figure 2a. Numbers fails to show the compressor "at the base of the boom" or connected (at least directly) to the boom. Allied Signal Aerospace teach, in a similar deicer system, that it is known to mount the air compressor and pump of the forced air system in a cubical enclosure at the base of the deicing boom. See especially the top of page 2. Motivation to combine is the mere substitution of the placement of the forced air equipment of Numbers such that it performs the same function but is at the base of the boom instead of at a further distance from it. To employ the teachings of Allied Signal Aerospace and have the compressor at the base or connected to the boom is considered to have been obvious to one having ordinary skill in the art. Also, the specific operating parameters of the system is considered to be non-patentable engineering details which

would be arrived at without undue experimentation and would be normally chosen in order to provide the desired performance for a particular situation. Upon correction of the straightforward 112 problem noted in paragraph 2, a more detailed analysis of the numerous claims and the question of declaring an interference will be performed. In consideration of that, this action has not been made final.
